## ONLINE CONFERENCE

# Enterprise Data Warehouse Offload and Migration (Level 200)

David McAmis, Partner Solution Architect

# Traditional Data Warehousing

Relational data

---

TBs-PBs scale

---

Schema defined prior to data load

---

Operational reporting and ad hoc

---

Large initial capex + \$10k-\$50k / TB / Year

# Amazon Redshift - 10x faster at 1/10<sup>th</sup> the cost

## Fast

Delivers fast results for all types of workloads

## Simple

Create and start using a data warehouse in minutes

## Cost-effective

No upfront costs, start small, and pay as you go

## Scalable

Gigabytes to petabytes to exabytes

## Integrated

Integrated with S3 data lakes, AWS services and third-party tools

## Secure

Audit everything; encrypt data end-to-end; extensive certification and compliance

# Data Warehouse Migration

- How quickly and easily can I migrate my on-premises data warehouse to the cloud?
- How can I minimize application downtime during the migration?
- How can I start offloading data to leverage the compute power of the cloud?
- Are there ways to automate schema conversion and conflict analysis?
- Can I migrate off commercial databases or data warehousing appliances?

# What are DMS and SCT?

**AWS Database Migration Service (DMS)** easily and securely migrate and/or replicate your databases *and* data warehouses to AWS

**AWS Schema Conversion Tool (SCT)** convert your commercial database and data warehouse schemas to open-source engines or AWS-native services, such as Amazon Aurora and Amazon Redshift

**We have migrated over 70,000 unique databases. And counting...**

# When to use AWS DMS

- Migrate databases to AWS with minimal downtime
- Database consolidation on AWS
- Continuous data replication with high availability
- Offload data warehouse data to run analytics in the cloud using Amazon Redshift
- Migrate data warehouses to Amazon Redshift
- Good network connectivity between your data center and AWS
- Source database engine is supported

# AWS SCT Data Extraction Agents

- Extracts through local migration agents
- Data is optimized for Amazon Redshift and saved in local files
- Files are loaded to an Amazon S3 bucket (through network or AWS Snowball) and then to Amazon Redshift

# AWS SCT Data Extraction Agents

Extraction Agents can be installed on:

- macOS
- Windows
- Red Hat Enterprise Linux (RHEL) 6.0
- Ubuntu Linux (version 14.04 and later)

And the agents support the following source data warehouses:

- Greenplum Database (version 4.3 and later)
- Netezza (version 7.0.3 and later)
- Teradata (version 13 and later)
- Vertica (version 7.2.2 and later)
- Oracle (version 10 and later)
- Microsoft SQL Server (version 2008 and later)

# When to use AWS SCT Data Extractors

- Migrate databases to AWS
- Large-scale data migrations (TB-PB)
- Offload data warehouse data to run analytics in the cloud using Amazon Redshift
- Migrate data warehouses to Amazon Redshift
- Source database engine or data warehouse appliance is supported
- When you need the option of using your network to transfer the data or using the AWS Snowball service

# AWS Snowball

AWS Snowball is a petabyte-scale data transport solution that uses secure appliances to transfer large amounts of data into and out of the AWS cloud

- Simple, fast, and secure data transfer
- 1/5 the cost of high-speed internet
- Can transfer up to 90 PB of data

# AWS Snowball

# Using AWS DMS/SCT and Snowball together

## Common use cases

- Migrate large databases (over 5TB)
- Migrate many databases at once
- Migrate over slow network
- Push vs. Pull

# Data Warehouse Migration Tasks

**Convert Data Warehouse Schema**

**Acquire and Configure Snowball Device  
(If required)**

**Install & Register Data Extraction Agents**

**Create Data Extraction Filters**

**Create & Run Data Extraction Tasks**
